3	1/10/22								Reports on tasks completed by Project Contractors	
4	Project (and last initial of consultant)	Description/Outcomes	Budget	Invoiced	l% Spent		Are there Current Challenges / Concerns / Issues	Last Task Completed	Current task, status, expected finish date	Next step and its deadline
		cost effectiveness, market penetration, depth and comprehensiveness of savings, customer equity,						Final Report completed and submitted to EA Team on		
62	C1906 SEM Design and Evaluation	and optimization of program expenditures. The C1906 project will focus on evaluating the Strategic Energy Management (SEM), a specific initiative of the Business and Energy Sustainability (BES) program to achieve energy and non-energy benefits. The Connecticut utilities currently do not claim savings from the SEM program; this project will primarily identify methods to estimate energy savings from the program from an evaluation perspective. Over the course of this study, the evaluation team will gather information about the current state of the SEM program and barriers to claiming savings, identify effective and costefficient methods for collecting the data for claiming defensible savings from SEM, research and advise on program processes to support the utilities in documenting and claiming savings from the initiative, and enable an eventual impact evaluation of the SEM initiative after methods to claim savings have been established.	\$668,355	\$785,000	63%	100%	None - project complete.	4/15/2021 - Present SEM Evaluation Methods Webinar	Process evaluation instrument development; January 7, 2021	Process evaluation instrument development; January 7, 2021
64	C2014 C&I Lighting	The primary objective of this study is to characterize the current status of the Connecticut C& lighiting market and then forecast the remaining potential for lighting programs. Phase 2 of this study is designed to better understand remaining potential in specific areas.	\$400,000	\$145,000			Data request for lighting measure tracking data submitted on 12/7. Requested for 1/7	Phase 2 Kick off on 11/19/21	Survey guide development: draft on 1/10	Survey implementation (2/1/22-2/25/22)
81	C1902 ECB NTG and Baseline	This study integrates NTG and market baseline research and analysis components to support improved accuracy of gross and net savings estimates for the ECB program. The study also includes non-residential new construction code compliance and estimation of NTG values for the Upstream non-lighting program. The outcomes can then be used to inform future program changes to increase program attribution.	\$680,000	\$548,830	81%	73%	None	Upstream NTG results presented to EA Team	Fielding cross-cutting market actor IDIs (Aug-Jan), fielding web-surveys for baseline component in Nov-Jan	Wrap up baseline surveys by end of Jan, code compliance analyses by end of mid-Jan, Reporting for upstream NTG (Jan)
82 SERA	Boiler & Furnace Study	Establish an Industry Standard Practice (ISP) baseline for boilers and furnaces in commercial buildings in CT. ter / Left Fork / BuildingMetrics	\$59,900	\$50,352	84%	95%	No STATUS SUMMARY	Resonse to comments 9/15/2021	Finalize report based on review draft comments	Finalize report based on review draft comments

3	1/10/22								Reports on tasks completed by Project Contractors	
4	Project (and last initial of consultant)	Description/Outcomes	Budget	Invoiced	l% Spent		Are there Current Challenges / Concerns / Issues		Current task, status, expected finish date	Next step and its deadline
84	X1931-5 Comm Refrigeration Efficiency Update Study	Update aggregate commercial refrigeration efficiency values through primary and secondary research (COP and ACOP). Recommend an approach to quantify HVAC interactive savings for measures with refrigeration savings.	\$29,600	\$32,000	108%	85%	No	Data analysis on individual systems complete and discussed with the EA Team.	Aggregate analysis of data for final ACOP values.	Draft presentation of results to EA Team 10/11/21
86	R1959 Single-Family Renovations & Additions Potential Analysis	Market characterization, savings potential study, and program pilot process evaluation for single-family renovations and additions	\$170,000	\$170,000	100%	100%	No, final study complete - distributed 11/22	Final report, Oct 2021.	N/A, complete.	N/A, complete.
89	R1965 HP/HPWH Baseline and Potential Assessment	The study will incorporate multiple primary and secondary data sources to estimate the size of the market in CT, including previous baseline studies, purchased sales data, as well as shipment data. The team will also solicit feedback from manufacturers, distributors, and installers through interviews and surveys to better understand the future of the market for heat pumps, as well as system configurations that are dominating the market. Finally, the team will perform cost effectiveness testing at the measure level, focusing on particular system configurations of interest.	\$325,000	\$273,304	84%	90%	None	Presented recs and results PPT to stakeholders on 12/17.	Review draft in progress, to EA Team by end of January.	Review draft to EA Team by end of January
	R1982.HVAC/DHW Performance and Potential Evaluation	R1982.Circuit-level monitoring of electric HVAC and DHW loads in single family homes. Data analysis to inform fuel use, seasonal efficiencies, and peak demand for HVAC and DHW equipment in single family Connecticut residences.	\$1,015,000	\$526,000	52%		Evergreen and Eversource have been emailing about additional emails and a second email blast (status TBD).	Initiated recruitment and the	Recruitment and equipment installations; ongoing QC	Recruitment of sites, installation of equipment. Deadline is as soon as possible
93	R2027 HP/HPWH Reliability	A study looking at the reliability, satisfaction, and repair costs of HP/HPWH	\$75,000	\$67,522	90%	95%	None	With R1965: Presented recs and results to Eval Committee and stakeholders 12/17.	With R1965: Submit review draft (with revisions to initial internal draft) to EA Team, Jan 2022	With R1965: Submit review draft (with revisions to initial internal draft) to EA Team, Jan 2022
94		The study will utilize multiple primary and secondary data sources to determine the gross and net energy savings associated with HES/HES-IE measures, as well as the effectiveness of the programs' delivery to residential customers in Connecticut. In addition to core impact (e.g., billing and engineering analysis) and process (e.g., interviews and survey) tasks, the study also includes a customer profiling effort that will combine program tracking, Census, and third-party data sources (where available) to identify geographic areas within the state that participate at higher- or lower-than-expected levels.	\$890,000	\$711,321	80%		Yes, we are awaiting one element from Eversource (in process and expected soon) and several from UI. We sent the EA Team an updated summary of our requests on 12/17; please see for more details.	Launched participant survey;	Surveys (finishing by late January), second wave of customer profiling insights (mid-January), as well as the billing analysis (elements we have data for in early January, rest as data are available).	Beside those in #15, the NTG results, which we've started analyzing using the survey completions to date
